

Offline.
Unhackable.

Open source.

■ THE PROBLEM

Online wallets *will* ~~can~~ be hacked.

AI is getting smarter every day.

Any connected app or device is at risk.

Most hardware wallets still make you sign blind.

DRIFT PROTOCOL · APRIL 1, 2026

\$285,000,000

Drained in a single transaction.

Two of five team members were tricked into approving what they could not read. The second-largest hack in Solana history. 26 days ago.

BLOOMBERG · CHAINALYSIS · TRM LABS · BLOCKSEC

Every signer in use today is **vulnerable**.

■ THE SOLUTION

The most secure signer in the world.

A signer you can actually trust.

ALWAYS OFFLINE

- No Wi-Fi, Bluetooth, NFC, or USB.
- Talks via QR code and screen.
- Minimal attack surface.

ZERO 3RD-PARTY TRUST

- No forced updates.
- You create your own keys.
- No blind signing.

FAST. OPEN. AUDITABLE.

- Built in Rust.
- Open source.
- Anyone can verify.

■ MARKET · BOTTOM UP

Where the money lives — and where it's exposed.

560M

People hold crypto worldwide. 820 million active wallets across the network.

TIER 01 ·
AUDIENCE**\$565M**

Hardware wallet sales in 2025. ~6 million units shipped, growing 18 % a year.

TIER 02 ·
MARKET**\$10B**

Already in multisigs on Solana. 300+ companies, DAOs, and treasuries — every one a target.

TIER 03 ·
WHERE WE START

The category is empty. **Ledger and Trezor were built for Bitcoin.** None of them speak Solana.

■ BUSINESS MODEL

Three streams. **One company.**

0 1	Device 20,000 devices shipped by Y3.	\$129 / unit
0 2	Team Subscription 1,500 teams subscribed by Y3 · \$1.78M ARR.	\$99 / month
0 3	Custom Case Premium accessory. ~15% attach.	\$35 / case

REVENUE PROJECTION

YEAR 1

\$200K

YEAR 2

\$1.2M

YEAR 3

\$5.0M

of which \$1.8M ARR (recurring)

Y1: 50 teams · 400 devices.
Y2: 400 teams · 4,000 devices.
Y3: 1,500 teams · 20,000 devices.

Hardware brings them in. **Recurring software is where the business compounds.**

■ 06 · THE TEAM

50+ years protecting other people's money.

CO-FOUNDER · DEVICE

Nahem Seguias

15+ years banking infrastructure · AI / blockchain dev. Built the device, firmware, tests, and architecture in Rust.

CO-FOUNDER · WALLET

Alejandro Mena

Ex-MetaMask · contractor for Chainlink and the Solana Foundation. Built the wallet UX the previous generation now uses.

CO-FOUNDER · INFRA

Javi Lois

25+ years software · banking core systems · high-latency, high-stakes infrastructure where 'lost the keys' is not a recoverable error.

Founder-problem fit: we are the people the last generation of wallets hired.

■ 07 • THE INVITATION

\$750K pre-seed. 12 months to first kit + 3 pilots.

THE ASK

\$750K

SAFE • 12-MONTH RUNWAY

- 60% engineering · firmware + extension
- 25% hardware run · first 500 kits
- 15% audits + institutional pilots
